Abstract of the Disclosure

A software application for enabling creation and execution of an
automated browser navigation sequence is provided. The software
application comprises a session recording module for recording parameters
associated with a manual navigation sequence, a file creation module for
converting data of a manual session into data comprising an executable
sequence of instructions for conducting an automated navigation sequence,
and an application-program-interface module for integrating a functional
capability with the automated navigation sequence. The automated
navigation sequence is characterized in that a completely automated
browser-navigation sequence performed by the browser application is
enabled through execution of the executable instruction sequence created
from the recorded parameters of the manual navigation sequence.
